

Nuclear Safety Consultants Nuclear Sector

ARCADIS is a leading international company providing services across three fully integrated business lines: Infrastructure, Environment and Buildings. We work diligently to deliver successful solutions that meet client objectives and to realise our vision to inspire extraordinary environments.

With a wealth of experience in the UK market we have the expertise and local knowledge to deliver results quickly and effectively, while ARCADIS' global reach and 'one team' approach means projects can operate seamlessly across multiple geographies. Clients value the fact that they get the reliability and scalability of a global brand with the agility and understanding of a local player.

ARCADIS Vectra is a leading supplier of specialist technical consultancy and implementation services to regulated industries and associated market sectors, primarily working for clients in the nuclear, oil, gas and process and transportation sectors enabling them to achieve their goals by developing risk management and specialised engineering processes.

The main function and scope is to support or lead (depending on experience) nuclear safety case projects, to provide consultancy support to clients on nuclear safety issues and to contribute to the growth of our nuclear sector by assisting in winning client and project work through the preparation of commercially focused proposals and prequalifications for projects and opportunities.

The ideal candidate is a confident communicator, highly motivated to deliver results. He/she has demonstrated operational experience working on nuclear plants, with particular knowledge of radiological safety, safety engineering and risk management.

Experience Candidates will be considered with experience ranging from junior assessors (minimum 2 years experience) to senior safety case practitioners. The ideal candidate will be able to demonstrate experience and skills in some of the following areas: hazard identification, deterministic and probabilistic/quantified risk assessments, safety case preparation, shielding and criticality analysis, human reliability assessment, IPR/INSA, safety audit, ergonomics, stress analysis, and design engineering substantiation, external hazards assessment, fire safety, ALARP studies and workplace design.
